REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims 25-38 are allowable over prior art of record.

The Examiner has found that the prior art of record does not render obvious the claimed limitations in combination with the specific added limitations as recited in independent claims and subsequent dependent claims.

One such prior art of record, Boucher (US Publication No. 2004/0003126 A1), teaches a communication processing device that provides a fast-path that avoids protocol processing for most messages, accelerating data transfer and offloading time-intensive processing tasks from a host CPU. The host retains a fallback processing for messages that do not fit fast-path criteria and the device provides validation for slow-path messages, and messages selected for either fast-path or slow-path processing.

However, the prior art of record fails to teach or suggest individually or in combination the claimed limitations of "receiving data packets at a central system from one of a plurality of pipes in the computer system for processing, each of the plurality of pipes connecting a different client system to the central system, the data packets being received during a time interval specific to the one pipe, each of the plurality of pipes in the computer system having a different time interval during which associated data packets are received; examining the data packets to determine whether to transmit the data packets on only one of a first path and a second path in the computer system such that none of the data packets are dropped before being outputted, the first path having a first storage that is a first type of storage, and the second path having a second

storage that is a second type of storage, the first type of storage being smaller in size and faster in speed than the second type of storage, wherein only the first type of storage is used to store the data packets on the first path and only the second type of storage is used to store the data packets on the second path; and forwarding the data packets to only one of the first storage and the second storage based on examination of the data packets, the first storage being for transmission on the first path and not the second path, and the second storage being for transmission on the second path and not the first path, all of the data packets received during the time interval being transmitted on a same path., " as in claim 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
